

Gully Woodland (EVC 902)

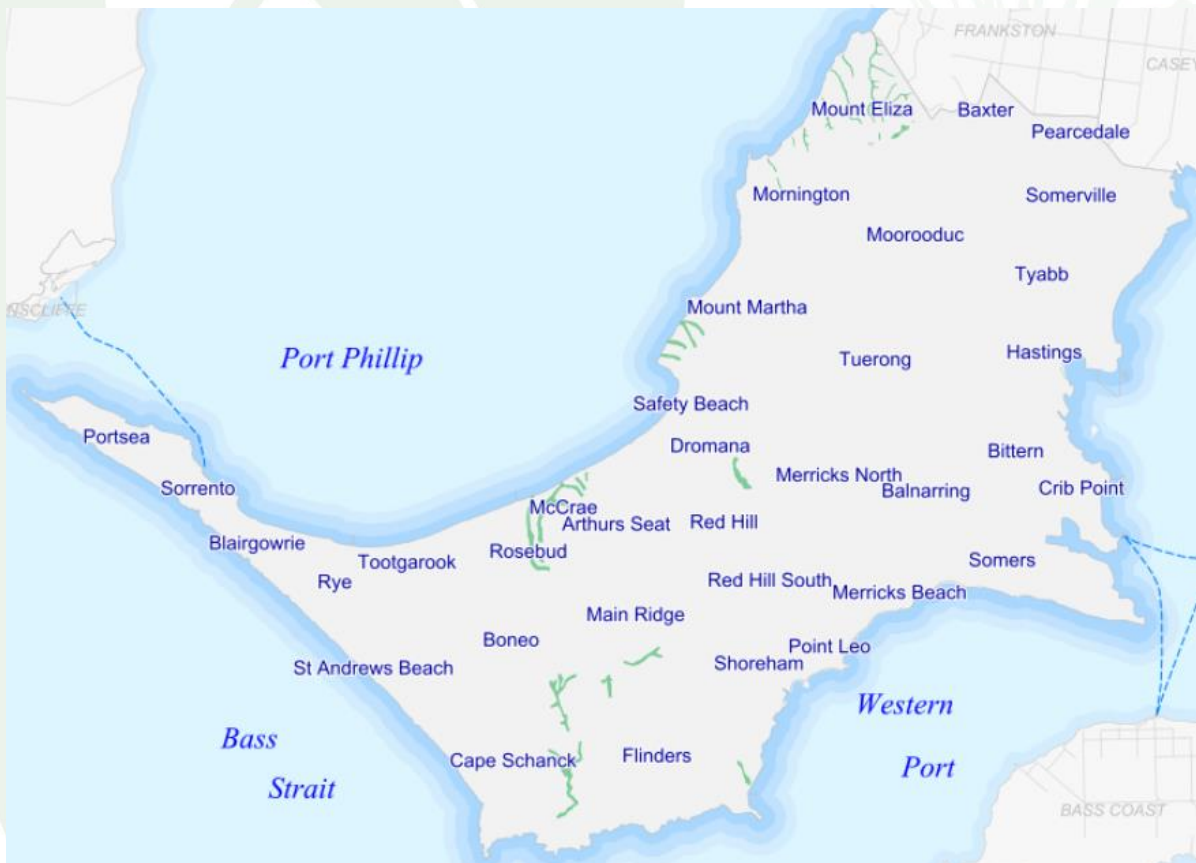

Ecological Vegetation Classes on the Mornington Peninsula

An Ecological Vegetation Class (EVC) is the standard unit for classifying native vegetation types in Victoria. Over 60 EVCs occur across the diverse landscape of the Mornington Peninsula. This EVC profile presents local environmental information for a specific EVC and is a useful reference for anyone interested in understanding, protecting, and restoring the unique biodiversity that occurs in their area.

Gully Woodland - Description

Woodland/forest to 25 metres tall. Occurs on gullies and sheltered slopes with relatively well-drained soils. Distinguished by prominent ground layer species Common Tussock Grass and rich fern flora. Sweet Bursaria and Maidenhair Fern may be abundant.

Pre-1750 distribution	Widespread and common in shady gullies on the Mornington Peninsula. See map below.
Present distribution	Widespread but rare
Peninsula status	Endangered
Bioregional status	Endangered
Typical site	Lightwood Creek at Greens Bush, Cape Schanck
